Measurable Management®

Objective

Five-S is a workplace organization methodology designed to simplify production processes by giving workers from management to the shop floor an understanding of how work is accomplished.

This workshop gives participants the

knowledge they need to apply the 5-S Lean Technique to their workplace. Five-S is taught as the foundation of a Lean Enterprise and then applied to a selected area.

Participants

The workshop is designed for up to 12 people.

Duration

The workshop is 2 full days for a total of 16 hours.

Pre-requisites

Participants should have completed a basic training course in lean manufacturing principles such as Lean 101 or equivalent.

Fee

\$2850, inclusive of all materials for up to 12 people. This is a fixed fee regardless of the number of participants.

Course Content

Participants will learn the methods of the 5-S system and then apply what they have learned in a live situation in their own facility.

Target Area

During the workshop, application activities will occur in a department or workstation of the participants' facility. The area will be transformed into a more efficient work area and will be a showcase for illustrating 5-S principles.
